Published research:

1- Improving prediction of plant disease using k-efficient clustering and classification algorithms
2- Brain computer interface enhancement based on stones blind source separation and Naive Bayes Classifier.
3- A New Ranking Technique to Enhance the Infection Size in Complex Networks.
4- Classification of Non-invasive recording of Electroencephalography Brain Signals using Hoeffding tree
5- Digital Modulation Classification Based On Chicken Swarm Optimization and J48 Algorithm.

Master's thesis title: Enhancement of Brain Computer Interface System based on a classified blind sources separation
